DETAILED ACTION

1. Amendment filed on 10/27/2005 has been entered.
2. Claims 1-41 are presented for examination.

Response to Arguments

3. Applicant's arguments with respect to claims 1-41 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

- The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).
5. Claims 1-2,39,41 are rejected under 35 U.S.C. 102(e) as being anticipated by Yanagisawa (U.S. Patent No. 6,525,972).

Regarding claims 1, 39, 41 Yanagisawa discloses a semiconductor memory device (Figure 1) , comprising:

an oscillator circuit (7) for generating an oscillation signal that varies based on a mode of operation;

a word line enable circuit (3) for generating a word line enable signal in response to the oscillation signal; and

a control circuit (4) for controlling the oscillator circuit and the word line enable circuit so that a pulse width of the word line enable signal is widened as operation mode of the memory device changes from an active mode to a stand- by mode (Column 8, lines 25-32).

Regarding claim 2, Yanagisawa discloses wherein the period of the oscillation signal is maintained as operation mode changes due to the widening of the pulse width (Column 7, lines 25-39).

Allowable Subject Matter

6. Claims 3-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 3-7 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Yanagisawa (U.S. Patent No. 6,525,972) others, does not teach the claimed invention having the control circuit controls the oscillator circuit so that the

Art Unit: 2827

period of the oscillation signal is lengthened after a given time elapses from the beginning of the stand-by mode 3-4, 7 disclosed, and the period of the oscillation signal is equal to a fresh period as claims 5-6 disclosed.

7. Claims 8-38, 40 are allowed.

Claims 8-38, 40 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. Yanagisawa (U.S. Patent No. 6,525,972) others, does not teach the claimed invention having a flag signal generator circuit for generating a flag signal indicating an end of a first refresh section of a stand-by mode of operation, after a given time elapses from a start of the stand-by mode as claim 8-38, 40 disclosed.
